SUMMARY

Computer Science student at Colorado Mesa University graduating in December 2025, seeking a full-time software engineering and/or web development role under OPT authorization. Skillful in full-stack development using Flutter and Firebase, with a strong foundation in C++, Python, and UI/UX design. Passionate about creating innovative solutions and continuously improving technical and professional skills. Originally from Brazil.

WORK EXPERIENCE

Full-Stack Developer at Quantum 13

May 2025 - present

Remote Internship - São Paulo, Brazil

- Developing an Integrated Management System (IMS) used by the company to manage installations, maintenance, payments, and support tickets.
- Role-base application.
- Building real-time client dashboards that allow customers to track project status and service.
- Implementing the platform using Dart/Flutter with Firebase as the backend, integrating authentication, Firestore, and cloud functions.

EDUCATION

2021 - 2025 Bachelor's in Computer Science at **Colorado Mesa University**

(GPA: 3.56/4.0)

PROJECTS

Quantum 13 - Integrated Management System

[Q13 IMS](#)

The Quantum 13 IMS is a web-platform that allows the company to manage installations, maintenance, payments and support tickets, all in one place. It also allows clients to visualize project progress and real-time data. This is a role-based platform, implemented with Flutter and Firebase as the back-end, integrated with Authentication and Cloud Functions. With that, a strong access-control is supported, allowing different user permissions and actions.

Secco Truco

[seccotruco.com](#)

"Truco" is a popular card game in Brazil. As an international student in the US, I made a lot of American friends that could not understand the game. So, I made this website to allow my friends to remember the rules, and visually explain the game to them. This done with the basic: HTML, CSS and JavaScript.

MSL Manager

[MSL Manager](#)

MSL Manager is a password manager, originally designed for MacOS. It was part of a semester long project for college, where I was taking *Programming Languages* and *Operating Systems* classes. With that, I decided to create an application in a new programming language - Dart/Flutter - that involved encryption. It uses AES-256 Encryption + IV in base64 to store passwords. Key is derived and encrypted from user ID. Also, the application allows for password generation.

Portfolio
